Mission and vision

Mission

- Goal: enhance environmental development in the maritime industry.
- Means: providing a tool for sea transport buyers to evaluate the environmental performance of ships and shipping companies.

Vision

Environmental considerations in economic decision making of transport buyers leads to:

- Competitive advantage for frontrunner
- Implementation best practice and innovations
- Speeding up regulatory processes.
- Clean Shipping

Testimonials

"We have **changed supplier** because of what we have seen in the Clean Shipping Database. During the **procurement** process we put **environmental demands** on the shipping companies if there is something specific that we want them to focus on, for instance if their SOX emission levels are too high. Then we put specific demands on that for the next procurement process."

Per Nilsson and Björn Lindahl
Global Supply Manager and Logistic Manager
Tetra Laval

Join the Clean Shipping Network

The Clean Shipping Index…

- is a tool for cargo owners and transport purchasers to evaluate environmental performance of ships and carriers
- provides an environmental ranking system for both vessels and carriers
- gives credit to maintenance, good operation and technical improvements
- is a web-based tool
- covers main types of vessels from all ages
- has a Network of many cargo owners such as H&M, SKF, Akzo Nobel which is a strong economic driving force
- has a potential to become "ticket to trade" for environmentally well performing carriers
- creates a "win-win" situation for cargo owners, quality shipping and the environment
